

RISKS – PILLAR III

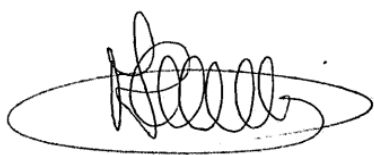

Update at
30 June 2025

STATEMENT ON INFORMATION PUBLISHED IN RESPECT OF PILLAR III

Senior management and the Board of Directors are responsible for implementing and maintaining an effective internal control organization overseeing the company's publications, including those issued in respect of the Pillar III report.

In that regard, I attest that group Mobilize Financial Services discloses in its Pillar III report the information required by Part Eight of Regulation (EU) No 575/2013 of the European Parliament and of the Council, amended by Regulation (EU) 2024/1623 of the European Parliament and of the Council of 29 May 2024 (CRR 3) in accordance with the formal policies, systems, and internal controls.

After taking all reasonable measures to that end, I confirm that the information reported on 30 June 2025 has been subject to the same level of internal audit as other information provided as regards the financial report.

INTRODUCTION

The following information concerns Group Mobilize Financial Services (Mobilize F.S.¹)'s risks and is provided to meet the disclosure requirements of Pillar III of the Basel Agreements, transposed into European law by means of Regulation (EU) 2013/575 (or CRR) amended by Regulation No. 2024/1623 of May 29, 2024 (CRR 3) and Directive 2013/36/ EU (or CRD IV) amended by Directive 2019/878/EU of 20 May 2019 (CRD V).

It is published on a consolidated basis (Article 13 of the CRR) and meets the requirements set out in part 8 of the CRR (Articles 431 and seq.).

Group Mobilize F.S.'s Pillar III report is published annually as a whole, but certain important or faster changing items are disclosed half-yearly, or only on a transitional basis (Article 492 of the CRR). No material, proprietary or confidential information is omitted (Article 432 of the CRR).

Publication of the risk report is the responsibility of Group Mobilize F.S.'s Company Chief Risk Officer. The information contained in this report has been prepared in accordance with the Pillar III disclosure procedure validated by Group Mobilize F.S.'s Regulatory Committee.

¹ RCI Banque S.A. has been operating under RCI Bank and Services trading name since February 2016 and adopted Mobilize Financial Services as a new commercial identity in May 2022. Its legal name remains unchanged and is still RCI Banque S.A. This trade name, as well as the acronym Mobilize F.S., may be used by the group as an alias to its corporate name. RCI Banque S.A. and its subsidiaries may be referred to as "Mobilize F.S. group".

The data relating to the LCR and its aggregates are averages of the 12 months ending on the reporting date mentioned (Article 447 f CRR 2).

Own funds requirements by type of risk

- Credit Risk - Internal Ratings Based Approach 50.6%
- Credit Risk - Standard Approach 36.4%
- Operational Risk 10.3%
- Credit Valuation Adjustment Risk 0.4%
- Market Risk 2.3%

RISKS – PILLAR III

Exposure by exposure class

- Retail 50.5%
- Retail SME 8.7%
- Corporates 20.5%
- Corporates SME 5.0%
- Central Governments or Central Banks 6.6%
- Institutions 3.3%
- Others 5.3%

ROA (net profit divided by the total balance sheet - CRD IV, Article 90)

	30/06/2025	31/12/2024	30/06/2024
Return on assets	1,25%	1,34%	1,33%

ROA was down in the first half of 2025 due to the slight increase in assets under management in the portfolio, while net income decreased slightly, mainly due to an increased current and deferred tax expense in 2025. At a constant effective tax rate, the ROA as of June 30, 2025 would be identical to the 2024 ROA.

B. CONTEXT

Moderate inflation in major advanced economies has enabled the start of a monetary policy easing cycle, led by the ECB, which cut rates by a total of 100 basis points in the first half of 2025. The BoE followed with a 25-point cut, while the Fed remains cautious despite expectations of further rate reductions by year-end, amid slowing economic growth, labor market tensions, and political uncertainty following Donald Trump's re-election. In the eurozone, disinflation and stable growth have justified the ECB's more accommodative stance. In the UK, the BoE is acting prudently in response to rising inflation and weakening growth. European bond markets reacted unevenly, with short-term rates falling and long-term rates rising, reflecting both medium-term growth expectations and heightened geopolitical risks. Liquidity in the bond market remained abundant, despite a brief pause in April triggered by Trump's announcement of new tariffs. In this context, MFS was able to issue €2.4 billion in bonds during the first half of the year at attractive market conditions.

C. RISK FACTORS

The identification and monitoring of risks are an integral part of Group Mobilize F.S.'s approach to risk management. This approach may be observed through risk-weighted asset levels, but also through other indicators, work and analyses conducted by the Group's steering and risks functions.

The various types of risks presented below are those identified to date as being significant and specific to Mobilize F.S. group, the materialization of which could have a major unfavorable impact on its business, financial situation and/or results. This is not an exhaustive list of all the risks taken by the group in the context of its activity or to which it is exposed because of its environment.

In light of the diversity of the Group's business, the management of risks is built around the following major risk types:

- **Interest rate risks and foreign exchange risks:** risk of a drop-in interest rate margin or in the value of the banking portfolio owing to a change in interest rates or foreign exchange rates.
- **Liquidity and funding cost risk:** liquidity risk occurs when Group Mobilize F.S. is unable to honor its commitments or cannot finance the development of its business in line with its commercial objectives. Funding cost risk corresponds to the risk of Group Mobilize F.S. not being in a position to finance its activities at a cost that is competitive.
- **Credit risk (Retail customers and Dealer networks):** risk of losses resulting from customers' inability to meet their financial commitments.
- **Residual value risk:** risk to which the Group is exposed as a result of the depreciation in the net resale value of a vehicle at the end of the financing contract (value below initial estimate).
- **Strategic risk:** risk resulting from the Group's inability to implement its strategy and achieve its medium-term plan.
- **Concentration risk:** risk resulting from a concentration in Group Mobilize F.S.'s exposures (countries, sectors, debtors).
- **Operational risks:** risk of losses or sanctions resulting from ineffective or inadequate internal processes involving staff and/or IT systems (IT risks), or external events, whether deliberate, accidental, or natural (Business interruption).
- **Non-compliance risks:** risk of legal, administrative, or disciplinary sanctions, of significant financial loss or reputational damage, arising due to non-compliance with provisions specific to banking and financial activities (laws and regulations in force, ethics codes, national, European and international banking regulations). These risks include legal risks, conduct risks, tax risks, risks relating to money-laundering and the financing of terrorism (AML-CFT), risks associated with the protection of personal data, and risks of non-compliance with banking regulations, risks related to corruption and influence peddling, and ethical risks.
- **Model risk:** risk associated with a failure in the models used by the Group in the course of its business. This notably relates to the use of inadequate price calculation, revaluation, hedging or risk management models. Failure of such models may be due to either the quality of the data used, the modeling technique or the implementation or use thereof.
- **Climate and environmental risks:** These are the risks related to extreme climate and environmental events (physical risks) and related to changes in technologies, regulations and market sentiment contributing to the transition to a low carbon economy (transition risks).
- **Geopolitical risk:** Risk of nationalization, limitation of fund transfers, adoption of new regulations unfavorable to creditors, international sanctions impacting the business.

RISKS – PILLAR III

Geopolitical and macroeconomic disruptions could have a negative impact on the Group's performance:

- Competition could intensify in the European market as car manufacturers seek to sell lost volumes in other markets; price decreases would have an unfavourable effect on the price of used vehicles, affecting the value of the collateral of the leases on which Mobilize FS takes financing, and the risk on the residual value (UK PCP and long-term lease)
- Disruptions in supply chains for raw materials or electronic components could slow down production, leading to lower business volumes and higher prices. This development, combined with a rise in interest rates that is difficult to pass on instantly to customer rates, could lead to a decline in the Issuer's net banking income. At the same time, rising inflation and the unemployment rate would have an adverse impact on credit risk.
- The intensification of cyber threats represents an increased risk on the Issuer's operational resilience.

The various risk types presented above are those identified at this time as being the most significant and typical for Group Mobilize F.S., and the materialization of which could have a major adverse effect on its operations, financial position, and/or performance. This is not an exhaustive list of the risks undertaken by the Group as part of its activities or in consideration of its environment.

II - CAPITAL MANAGEMENT AND CAPITAL ADEQUACY

A - SOLVENCY RATIO

SOLVENCY RATIO (OWN FUNDS AND REQUIREMENTS)

In September 2007 the French Prudential Supervision and Resolution Authority granted the group Mobilize F.S. individual exemptions from solvency ratio compliance for French credit institutions Diac SA and RCI Banque S.A., as the exemption conditions imposed by Article 4.1 of CRBF regulation 2000-03 were met by the group.

The switch to Directive 2013/36/EU (CRD IV) does not call into question the individual exemptions granted by the French Prudential Supervision and Resolution Authority before 1st January 2014, on the basis of previous regulatory provisions.

RCI Banque S.A. still complies with the framework of requirements provided in Article 7.3 of the CRR:

- There is no impediment to the transfer of own funds between subsidiaries;
- The risk measuring and control systems within the meaning of the ministerial order of 3 November 2014 on internal control are implemented on a consolidated basis, subsidiaries included.

Accordingly, the Group Mobilize F.S. is exempted from compliance on an individual basis with the solvency ratio for each of its French finance companies. However, it monitors changes in this ratio at group consolidated level every month.

The overall "Pillar I" solvency ratio² is 15.40% at 30 June 2025 (of which Core Tier one at 12.73%) against 17.69% published at 31 December 2024 (of which Core Tier One at 13.96%).

The new CRR3 banking regulation, introduced in 2025 lead to an increase in REA impacting the solvency ratio at the end of June

The decrease in the overall ratio is partly explained by the increase in REA3 (+€5,042 million mainly due to the impact of CRR3 (+€3,890 million on the December 2024 REA) and the growth in activity. Furthermore, total capital ratio varies by -€211 million due to the -€320 million decrease in T2 and the +€109 million increase in CET1.

Prudential own funds are determined in accordance with Regulation (EU) 575/2013 concerning prudential requirements applying to credit institutions and investment firms (CRR).

The group must apply the following capital buffers:

- A capital conservation buffer of 2.5% of total risk-weighted exposures.
- A countercyclical capital buffer applied to some countries as described in CCyB1 table below.

Notification by the ECB of the Supervisory Review and Evaluation Process (SREP) decision

At the end of 2024, the European Central Bank has notified to Mobilize F.S group its decision regarding the level of additional capital requirement under Pillar 2 (P2R - "Pillar 2 Requirement") for the year 2025. It is set at 2,25%, applicable from 1st January 2025.

Minimum requirement for own funds and eligible liabilities (MREL)

Under Article 12d(2a) SRMR, as amended pursuant to Directive (EU) 2024/11742 (the "Daisy Chains II" Directive), entities for which the treatment applied will be "liquidation" and for which the amount necessary for loss absorption corresponds to the own funds requirements are exempted from MREL.

Consequently, in accordance with Article 4 of the Daisy Chains II Directive, Decision SRB/EES/2024RPC/25 of October 3, 2024, repeals, with effect from November 14, 2024, Decision SRB/EES/2023/29 of October 5, 2023, determining the MREL for RCI Banque S.A. and DIAC S.A., adopted in 2023.

² Ratio including the interim profits net of provisional dividends, following the regulator's approval in accordance with Article 26 § 2 of Regulation (EU) 575/2013

³ Risk Exposure Amount (REA): RWA (Credit Risk), CVA, Operational Risk and Market Risk

In accordance with the method used to calculate the countercyclical capital buffer, only the own funds requirements stipulated under Article 140(4) of CRD are included.

RISKS – PILLAR III

EU CCyB2 - Amount of institution-specific countercyclical capital buffer

In Millions of euros		Amounts
		a
1	Total risk exposure amount	48 168
2	Institution specific countercyclical capital buffer rate	0,75%
3	Institution specific countercyclical capital buffer requirement	361

Group Mobilize F.S. is not subject to the buffer required for systemically important institutions, nor to the systemic risk requirement.

B - OWN FUNDS

COMMON EQUITY TIER ONE ("CET 1")

Common equity Tier 1 capital comprises share capital and the related share premiums, reserves, non-distributed net profit after tax and accumulated other comprehensive income and minority interests after application of transitional provisions concerning prudential filters.

The amount of equity on the prudential scope of consolidation is identical to that of the accounting scope of consolidation.

This amount of own funds is reduced by the forecast dividend distributable in respect of the profits of 2024.

The main prudential filters applying to the group are:

- Exclusion of fair value reserves related to gains and losses on cash flow hedges.
- Exclusion of gains and losses recognized by the institution from valuing liabilities at fair value that are due to changes in the institution's credit standing.
- Prudential valuation adjustments (PVA). Total assets & liabilities valued at fair value represent less than €15 billion, therefore RCI Banque S.A. applies the simplified method to calculate this additional adjustment to own equity.

Other Adjustments:

- Concerning the minority interests, in line with article 84.2 of CRR, RCI Banque S.A. chose not to undertake the calculation in article 84.1 for the subsidiaries referred to in article 81.1. Consequently, no minority interests are included in consolidated Common Equity Tier 1 Capital.
- Deduction of deferred tax assets dependent on future profits linked to unused deficits netted by the corresponding deferred tax liabilities.
- Intangible assets and goodwill.
- Irrevocable payment commitments and certificates of association pledged to Single Resolution Funds and Deposit Guarantee and Resolution Funds.
- IRB shortfall of credit risk adjustments to expected losses described in articles 158 and 159 (CRR).
- Insufficient coverage for non-performing exposures.

Shareholdings of more than 10% in financial sector entities and deferred tax assets dependent on future profits linked to temporary differences are lower, after application of the threshold, than the twofold common deductible of 17.65% and are therefore weighted by 250% in assets.

No phase-ins are applied.

Group Mobilize F.S.'s CET1 core capital represents 83% of total prudential capital.

Regulatory equity increased by €192m compared to December 31, 2024, and reached €6 131m at the end of June 2025. The increase is mainly explained by the integration of interim profits net of provisional dividends.

RISKS – PILLAR III

ADDITIONAL TIER 1 CAPITAL (“AT1”)

This comprises capital instruments, which are free of any repayment incentive or obligation (in particular jumps on yield), as described in Articles 51 and 52 of the CRR. Group Mobilize F.S. holds no such instruments.

COMMON EQUITY TIER 2 (“CET 2”)

This includes subordinated debt instruments with a minimum term of 5 years without advance repayment during these first 5 years, as described in Articles 62 and 63 of the CRR.

These instruments are subject to progressive prudential amortization over the five-year period preceding their maturity.

Group Mobilize F.S. group classifies the subordinated securities issued by RCI Banque S.A. in July 2024 and March 2025 for a total amount of €1250 million, the subordinated security issued by Banco RCI Brasil S.A. in November 2024 for 200.1M BRL (accounted for €28M), as well as the subordinated security issued by RCI Finance Maroc SA in December 2020 for 68M MAD (accounted for €6M).

When expected losses are lower than value adjustments and collective impairments, the balance is added to additional equity up to 0.6% of the weighted risks of exposures treated by the “internal rating” method. At the end of June 2025, this amount is zero.

No transitional filter is applied to Tier 2 equity for Group Mobilize F.S.

80	Current cap on CET1 instruments subject to phase out arrangements		
81	Amount excluded from CET1 due to cap (excess over cap after redemptions and maturities)		
82	Current cap on AT1 instruments subject to phase out arrangements		
83	Amount excluded from AT1 due to cap (excess over cap after redemptions and maturities)		
84	Current cap on T2 instruments subject to phase out arrangements		
85	Amount excluded from T2 due to cap (excess over cap after redemptions and maturities)		

C - CAPITAL REQUIREMENTS

Prudential requirements are determined in accordance with transitional texts and arrangements applying from 1st January 2014 to credit institutions and investment firms, as published in the Official Journal of the European Union on 26 June 2013: Regulation (EU) 575/2013 and Directive 2013/36/EU, transposed by Order 2014-158 of 20 February 2014.

RCI Banque S.A. does not own any non-consolidated financial institution with an actual amount of capital less than its capital requirement.

26	<i>Output floor applied (%)</i>	72,5%		
27	<i>Floor adjustment (before application of transitional cap)</i>			
28	<i>Floor adjustment (after application of transitional cap)</i>			
29	Total	48 168	43 126	3 853

The increase in credit risk exposure under the standard approach is mainly due to the integration of the Mein Auto group. The 'Amounts below the deduction thresholds (subject to 250% weighting)' have been included in the 'Credit Risk (excluding CCR)' total, in accordance with the instructions of Regulation 2021/637.

RISKS – PILLAR III

D - MANAGEMENT OF INTERNAL CAPITAL

EU OVC - ICAAP information

Legal basis	Row number	Free format	
Article 438(a) CRR	(a)	Approach to assessing the adequacy of the internal capital	<p>The monitoring of the internal economic capital is insured by the Internal Capital Adequacy Assessment Process (ICAAP). It is conceived as a continuous process integrated into the overall governance and ensures the adequacy of own funds regarding the risks taken by the bank, based on its internal assessment.</p> <p>The ICAAP combines the following main processes:</p> <ul style="list-style-type: none"> • Risk assessment process: Group Mobilize F.S. analyses all the risks exposures comprising the regulatory risks: credit risks, operational risks, market risks, and other risks, the capital need for which can be evaluated through quantitative or qualitative measures. The risk assessment process and results are consistent with the risk management framework. • Baseline and stressed scenarios definitions process: Group Mobilize F.S., in line with the budget process and its strategy, defines the assumptions of the baseline scenario and the stressed scenarios used for the forecasts. • Economic capital adequacy calculation process: Group Mobilize F.S., risk by risk, regularly evaluates needs in economic capital and ensures that sufficient internal capital is available to cover these requirements. The comparison is also performed between the economic capital requirements and regulatory capital requirements. • Allocation process: Group Mobilize F.S. ensures that the economic needs are respected on the relevant perimeter. • The process of analyzing the impact on the capital of any strategic investment
Article 438(c) CRR	(b)	Upon demand from the relevant competent authority, the result of the institution's internal capital adequacy assessment process	NA

E - LEVERAGE RATIO

The Basel III/CRD IV regulations introduce the leverage ratio, the main aim of which is to serve as an additional measure to capital requirement based on weighted risks in order to avoid excessive development of exposures in relation to own funds.

Article 429 of the capital requirements regulation (CRR) specifies the methods for calculating the leverage ratio; it has been modified and replaced with delegated regulation 2024/1623 of the European Parliament and of the Council of 31 May 2024(the "CRR 3" Regulation). The leverage ratio shall be calculated as the ratio of the institution's Tier 1 capital to that of institution's total exposure, which includes balance sheet assets and off-balance sheet assets measured using a prudential approach.

Since 1st January 2015, disclosure of the leverage ratio has been mandatory (Article 521-2a of the CRR) at least once a year (CRR a.433), together with the financial statements (BCBS270 Article 45).

Group Mobilize F.S.'s leverage ratio, calculated according to CRR 3/CRD VI rules was 8.09% at 30 June 2025, slightly up from December 31, 2024, when the same ratio was 8.04%.

EU LRA - Disclosure of LR qualitative information

Descriptions of the procedures used to manage the excessive leverage risk	<p>Group Mobilize F.S. monitors its leverage ratio on a monthly basis and keeps the Executive Committee informed thereof. The ratio is also stated in the balanced scorecard of risks provided quarterly to the Board of Directors' Risks Committee. An internal limit has been set and a warning system has been put in place.</p>
Description of the factors that had an impact on the leverage ratio during the period to which the disclosed leverage ratio refers	<p>Group Mobilize F.S. disclosed a Basel III leverage ratio of 8.09% at the end of June 2025 compared to 8.05% at the end of December 2024.</p> <p>The Tier I equity (numerator) represents 6,131 MEUR, slightly increasing by +1.8% compared to end of December 2024, mainly due to the accounting of H1 result net of foreseeable dividend.</p> <p>The value exposed to the risk (denominator) is set at 75,778 MEUR, up +1.3% compared to December 2024, mainly due to the increase of the assets linked the customer and dealer financing activities.</p>

F - MANAGEMENT OF THE LEVERAGE RATIO

Management of the leverage ratio consists both in calibrating "Tier 1" capital (the numerator of the ratio) and adjusting the group's leveraged exposure (denominator of the ratio). Monthly monitoring ensures that the leverage ratio is higher than the minimum of 3% endorsed with the adoption of the banking package (CRR 3 / CRD V).

III - CREDIT RISK

A - EXPOSURE TO THE CREDIT RISK

The Mobilize F.S group uses three risk-classification levels for receivables and writes them down on an individual or collective basis. The valuation presentation and principles are described in part A of the notes to the consolidated financial statements.

These classification levels are:

- **Bucket 1:** no deterioration or insignificant deterioration in credit risk from origination.
- **Bucket 2:** significant deterioration of credit risk from origination or non-investment grade financial counterparty;
- **Bucket 3:** classification of counterparty in default

Mobilize F.S group applies EBA/GL/2016/07 «Guidelines on the application of the definition of default» issued by the European Banking Authority (EBA) published on 01/18/2017 as well as EBA/RTS/2016/06 «Final draft RTS on materiality threshold of past due credit obligations» published on 09/28/2016.

B - RISK-WEIGHTED ASSETS

Group Mobilize F.S. uses the advanced method to measure credit risk on certain types of customer outstandings (Retail, Corporate and Dealer) in the following countries: France, Germany, Spain, Italy, South Korea and the United Kingdom⁴. For all other exposures, Group Mobilize F.S. uses the standardized method.

C - ADVANCED METHOD

Group Mobilize F.S. has adopted the most advanced methods proposed by the reform known as Basel II/III/IV to measure and monitor its credit risks, all parameters are therefore estimated internally. The values thus measured are applied to calculate exposure risks on the Retail, Corporate and Dealer customers. Six big countries (Germany, Spain, France, Italy, South Korea and United Kingdom) are treated using the advanced approach based on internal ratings.

For all of these scopes, Group Mobilize F.S. has obtained the following authorizations:

- For France, Germany, Italy and Spain, approved in January 2008;
- For the United Kingdom, approved in January 2010;
- For Korea, approved in June 2011.

Following supervisory approval, corporate portfolios (outside the network) in Germany, Italy and Spain have been treated using the standard method since 2021.

The credit risk models applied within the Mobilize F.S. are subject to a return to compliance plan that includes a return to less sophisticated methods on certain portfolios or the implementation of corrective actions on the models maintained in use.

a) Segmentation of exposures by the advanced method

All figures relating to credit risk exposures concern gross exposures, i.e. before application of Credit Conversion Factors and Credit Risk Mitigation techniques.

The RWEA density (weighted risks/exposures) totals 42% for the Retail Customer portfolio and 63% for the overall Corporate portfolio using the advanced internal rating method and 82% for the basic internal rating method.

The CCF percentage (Credit Conversion Factor) is at 100% for off-balance sheet exposures under the advanced method.

⁴ For these 6 countries, some portfolios are in standard approach (examples: Corporates in the United Kingdom, Large Corporates outside France). Furthermore, RCI Korea is not concerned by the dealer financing activity.

b) Borrower data dimension - Probability of Default (PD) parameter

Monthly revaluation of customer risks is based on:

- A model for ranking the risk of default;
- A method for quantifying the related probability of default.

i) Risk ranking model

The ranking of counterparty risk results from a score that includes both the customer's characteristics and the latter's payment record. The models are adapted to each customer typology to account for the profile of the modeled population.

The table in paragraph below shows the mapping of the models developed.

ii) Allocation to a class of risk and quantification of the PD related to each class

The rating scales feature a number of classes adjusted to the granularity of the portfolio. Retail customers are divided into ten classes for the sound portfolio and one default class; Corporate and Dealer portfolios are divided into seven classes.

The required degree of reliability for internal rating has nonetheless meant that each "country/customer segment" portfolio has been broken down in a specific manner: for a given segment, the risk attached to a particular class in France, measured by its representative PD, is different from the risk attached to the same class in Spain.

The PD associated with each class is calculated by factoring in historically observed default rates.

It is specified that new PD Retail models for all countries were put into production in 2020, following their validation by the ECB. PD's of this new models have been recalibrated following the new definition of default (conforms to EBA Guideline: EBA GL 2016 07 Final Report on Guideline on default definition) and these PD were put into production in December 2021 following European Central Bank authorization.

In addition, following the ECB's approval of the Retail package application submitted in June 2021, two new models were deployed in production. Those models included the Italy ENT (Enterprise) PD and the UK GP (Grand Public or Natural Persons) PD score models deployed in production in November 2022 and February 2023 respectively. The ECB has also authorized the release of the PD Retail values validated during the inspection of the Retail package application.

Segmentation of exposures by the advanced method and average PD by country

Category of exposure	IRBA countries	Average sound portfolio PD at 30/06/2025
Retail customers	Germany	1,57%
	Spain	1,82%
	France	2,72%
	Italy	2,08%
	United Kingdom	2,88%
	South Korea	1,08%
Small and medium-sized companies	Germany	2,06%
	Spain	4,34%
	France	4,19%
	Italy	4,31%
	United Kingdom	3,74%
	South Korea	1,45%
Large corporations	Germany	2,29%
	Spain	5,11%
	France	2,46%
	Italy	6,85%
	United Kingdom	2,98%

c) Transaction data dimension – Loss given default (LGD) parameter

Economic losses are estimated using discounted recovery flows for Retail Customers and Corporates, or debt write-offs for the car dealers, on the basis of historical data generally going back at least 7 years.

RISKS – PILLAR III

Recovery costs are factored in according to the management phases involved. After analysis, transactions have been grouped into segments representing homogeneous loss levels.

The quantifying of these losses per segment results from a statistical model the main vectors of which are a generational analysis of recoveries and the speed of collection.

Segmentation of exposures by the advanced method and average LGD by country

Catégorie d'exposition	Pays IRBA	Segmentation de la population	LGD moyenne portefeuille sain	Taux de perte calculé au dernier Backtesting
Clientèle de détail PME	France	Crédit avec un ratio montant d'exposition / montant initial du financement ≥ 1	52,67%	37,37%

d) Procedures for monitoring internal ratings

The results of the internal rating process, the performance of the models and the main data items making it up are monitored quarterly by the modeling teams.

At least once a year, observed changes lead to a formal analysis according to a standard protocol described in a procedure.

Differences between the models' forecasts and the actual figures are analyzed and summarized in a formal report that also includes a quantification of the impact on the capital requirement.

Elements of the performance of the rating models are also reported twice a year to the Executive Committee during a dedicated presentation and to the Risk Committee of the Executive Board.

RISKS – PILLAR III

Regulatory changes with a significant impact on the models are monitored and analyzed in detail by the modeling teams. This is notably the case for the EBA Regulatory Technical Standards (RTS) on the new definition of default for which two packages were sent to the ECB in 2020 and for which the group has obtained the ECB's approval. Furthermore in 2021 three new packages were sent to the supervisor on the following perimeters: Corporate (in 2021 March), Retail (in 2021 June) and Wholesale (in 2021 December). For the retail perimeter, an ECB IMI mission took place in the second semester of 2021 resulting in a decision that enabled the implementation of the PD parameters in November 2022. This was the case for all portfolios with the exception of the UK GP portfolio which was put in production in February 2023.

Another ECB IMI mission was conducted at the end of 2022 on the Corporate scope, with the decision letter communicated in March 2024.

Finally, an IMI mission was conducted in the second quarter of 2024 on the scope of the Network models. This mission focused on the new PD scores for France and the UK and the calibrations of the other PD models. However, following the Landscape model accepted by the ECB, it was decided the network portfolio will be processed in foundation method with the exception of the Germany secondary network which will switch to standard. The follow-up letter relating to this mission has not yet been communicated.

The various elements of the internal rating and first-level control system produced by the Quantitative Credit Risk Analysis Department teams are reviewed independently by the model validation unit of the Risk and Banking Regulation Department within the Risk Management Department.

These independent controls are governed by a procedure and reported at dedicated validation committees. The resulting areas for improvement are the subject of action plans proposed by the teams and validated and monitored by the validation unit.

As part of its periodic controls, the Internal Audit reviews the process of internal models and the first and second levels of controls to assess their adequacy and conformity.

EU CR8 – RWEA flow statements of credit risk exposures under the IRB approach

The purpose of this section is to depict the root cause of RWEA variation by quarterly step.

In Millions of euros		Risk weighted exposure amount	Risk weighted exposure amount
		06/2025 a	03/2025 b
1	Risk weighted exposure amount as at the end of the previous reporting period	22 403	22 691
2	Asset size (+/-)	545	-408
3	Asset quality (+/-)	1 480	153
4	Model updates (+/-)		
5	Methodology and policy (+/-)		1 169
6	Acquisitions and disposals (+/-)		
7	Foreign exchange movements (+/-)	-79	-1 202
8	Other (+/-)		
9	Risk weighted exposure amount as at the end of the reporting period	24 349	22 403

Between March and June 2025, the level of RWEAs has mainly increased due to the increase in outstandings.

Changes in asset size are mainly due to the cyclical nature of dealer financing activity, which peaks in June and December.

D - STANDARDIZED METHOD

The credit risk exposures treated using the standardized method comprise financed sales outstandings of subsidiaries not treated using the advanced method, debts to credit institutions and central banks, and all other consolidated assets that are not credit obligations.

To calculate the capital requirement for credit risk under the standardized method, Group Mobilize F.S. uses Moody's, the external credit rating agency, for sovereigns, international organizations, corporate establishments and investments. Reconciliation of these ratings with the credit quality steps provided for under the regulations complies with the supervisor's requirements. Beyond this framework, there is no use of any external rating that cannot be applied directly. As regards unrated exposures, Group Mobilize F.S. applies the regulatory weightings in accordance with the CRR.

For hedge transactions, the values of counterparty credit risk exposures on interest-rate or forex derivatives are determined by the market price method, adding, to the current replacement cost, the potential future credit exposure based on the remaining term. Such transactions still concern countries not covered by EMIR regulations.

CRM: Credit Risk Mitigation

CCF: Credit Conversion Factor

RWA: RWEA applicable to credit risk only.

The 100% CCF applies to all off-balance exposures since the revision of conversion factors introduced by CRR3. The increase in exposures to “Institutions” is mainly linked to the CRR3 requirements which modify the method of rating institutions and remove the use of sovereign ratings for unrated institutions.

“Other items” are mainly made up of exposures to residual values. These exposures receive a weighting of $1/t$, t being the residual duration of the lease agreement presented in years (CRR article 134.7).

Other collateral								
Total								

Group Mobilize F.S. undertakes transactions towards Central Counterparties in line with the EMIR regulation. Collateral is obtained and paid in the form of cash.

However, these transactions do not enter into the calculation of the exposure to counterparty credit risk because the netting agreements have not yet been recognized by the competent authorities in accordance with Article 296 of the CRR.

RISKS – PILLAR III

EU CCR8 - Exposures to CCPs

In Millions of euros		Exposure value	RWEA

17	Segregated initial margin		
18	Non-segregated initial margin		
19	Prefunded default fund contributions		
20	Unfunded default fund contributions		

IV - CREDIT VALUATION ADJUSTMENT RISK

For all over-the-counter derivatives, if derivatives recognized as credit protection are not used, Group Mobilize F.S. determines a capital requirement for “Credit valuation adjustment” (CVA) risk.

This capital charge is designed to cover losses in the event of downgraded quality of the counterparty, entailing a decrease in the value of the derivatives.

The requirement is calculated by the standardized method defined in Article 384 of regulation (EU) 575/2013.

V - LIQUIDITY RISK

Liquidity Coverage Ratio (LCR)

The Liquidity Coverage Ratio (LCR) sets a minimum standard for bank liquidity. It is intended to ensure that a bank has an adequate level of unencumbered High Quality Liquid Assets (HQLA), which can be converted into cash to enable it to meet its liquidity needs for 30 calendar days in a stress scenario. The LCR is thus defined as the ratio of HQLAs to net cash outflows over the next 30 days. Net outflows represent the expected outflows less expected inflows or 75% of expected outflows, whichever is the lower.

Group Mobilize F.S.’s liquidity is managed by the Finance and Treasury Division that centralizes funding for European entities and oversees balance sheet management for all group entities throughout the world.

For each quarter, the following table shows the average values of HQLAs, Inflows and Outflows calculated as the simple average of month-end observations over the twelve months preceding the end of each quarter.

The bank’s average HQLA during the 12-month period ending on 30 June 2025 was €6,243m. It amounted to €6,467m on average during the 12-month period ending on 31 December 2024. They mainly consisted of deposits with the European Central Bank, Bank of England and securities issued by governments or supranationals. On 30 June 2025, the average duration of the bond portfolio was below one year.

In addition, Group Mobilize F.S. also invested in a fund whose assets are made of debt securities issued by European agencies, sovereigns, and supranational issuers. Its average exposure to credit risk is six years with a limit at nine years. The fund is aiming a very low exposure to the interest rate risk with a maximum of two years.

Over the 12-month period ending on 30 June 2025, EUR and GBP denominated HQLA represented on average 86.5% and 11.7% of total HQLA respectively. The weight of EUR denominated HQLA slightly decreased compared to the averages of the 12-month period ending on 31 December 2024, which were 87.1% for EUR and 11.3% for GBP.

Group Mobilize F.S. Inflows mainly come from commercial and financial assets, while Outflows are mostly explained by debt repayment and the deposit run-off factor.

The liquidity requirement linked to derivative transactions is limited and represents non-material amounts.

The average LCR over the 12-month period ending on 30 June 2025 came at 500%, compared to 550% on average over the 12-month period ending on 31 December 2024.

RISKS – PILLAR III

Net stable funding ratio (NSFR)

The NSFR is a one-year liquidity ratio. It provides a framework to limit banks' transformation on maturities by requiring that stable assets are funded by a minimum amount of stable liabilities. Stable funding requirements and available stable funding are calculated by multiplying assets, liabilities and off-balance sheet exposures with coefficients reflecting their residual maturity and stability characteristics. The Group's NSFR at the end of June 2025 is 126%, stable compared to 126% at the end of December 2024. This level is significantly higher than the regulatory minimum and reflects a prudent liquidity risk management policy.

EU LIQ2 - Net Stable Funding Ratio

VI - ESG RISKS

Environmental, Social and Governance ESG risks correspond to the effects that may be caused by climate related and environmental events, social and societal changes as well as governance failures in the operation and conduct of the Group's activities but also for Mobilize F.S. group counterparties. ESG risks are factors that can increase certain traditional categories of risks, especially credit and counterparty risks, residual value risks, liquidity risks, strategic risks, operational risks and non-compliance risks.

ESG risks are therefore likely to impact the business, operating result, financial position and reputation of Mobilize F.S. group through its direct business and indirectly through its counterparties (for example, which may impact their default rate).

Only items showing a significant change compared to Pillar 3 of December 2024 are commented. In the absence of specific information, section 11 of the ESG risks of Pillar 3 of December 2024 is the reference.

- Since 2022, Mobilize F.S. group has implemented a project to evaluate financed emissions of vehicles in portfolio, for all type of clients.
- Low-emission vehicles (battery electric vehicles and plug-in hybrid vehicles) represent 8.8% of all active contracts

GHG emissions of financed vehicles reach 180,4 gCO₂/km on average (well to wheel), below December 2024 (184,7gCO₂/km with consistent methodology). Definitions and assumptions used are described in the methodological note accompanying the quantitative models of Pillar 3 of December 2024 and below for the methodological evolutions at the end of June 2025.

The template 3 related to portfolio alignment metrics, compared to IEA scenario net zero 2050, presents the same indicators (weight of electric vehicles in the portfolio and average GHG emissions of the portfolio in gCO₂/km) limited to the scope of non-financial corporate clients.

Introduction to quantitative tables:

Scope

The tables presented below illustrate the data for the entire Mobilize F.S group.

Maturity

The residual maturity presented in tables 1, 4 et 5 are shown in number of months.

* In accordance with the Commission delegated regulation (EU) 2020/1818 supplementing regulation (EU) 2016/1011 as regards minimum standards for EU Climate Transition Benchmarks and EU Paris-aligned Benchmarks: Climate Benchmark Standards Regulation.
 Footnote 6: Sectors listed in Sections A to H and Section L of Annex I to Regulation (EC) No 1891/2006.

RISKS – PILLAR III

Methodology linked to financed emissions calculations

The Mobilize F.S. Group primarily finances vehicles (passenger cars and light commercial vehicles). The financed emissions are made up of the greenhouse gas emissions of the vehicles financed in the portfolio, from an average annual mileage, focusing on the use phase. As such, financed emissions are evaluated based on the emissions of financed vehicles using databases provided by manufacturers or external databases that record technical information related to vehicles registered in Europe (European Environment Agency databases). Financed emissions are not reported in proportion to the emissions recorded by counterparties (declared or estimated). For this reason, 0% has been systematically indicated in the GHG Emissions column: percentage of the gross book value of the portfolio according to the company's own declarations.

Financed emissions are reported using the PCAF methodology, section 5.6 Motor Vehicle Loans. All types of contracts (credit or leasing) are treated according to the same methodology.

The average mileage used is aligned with Renault Group statistics on vehicle lifespans and total mileage considered. These elements take account for an average vehicle lifespan of 15 years and a total mileage of 200,000 km.

The usage phase includes the "well to wheel" emissions of vehicles, which encompass:

- Emissions related to fuel combustion during the movement of thermal and hybrid vehicles (tailpipe – tank to wheel)
- Emissions related to the electricity consumption of electric and hybrid vehicles (well to socket)
- Emissions related to the production and transportation of fuels (well to tank)

The "tailpipe" emissions mainly come from gCO₂/km data provided by Renault Group to the Mobilize F.S. Group or from the European Environment Agency (EEA) databases.

Manufacturer databases allow, in most cases, an exact match between a vehicle, through its identification number, and individual CO₂ data.

The EEA databases have been used to establish average values by model, country, engine type, and year of sale. Since 2023, a coefficient representing real-world emissions has been added to the homologated tailpipe and electric consumption data for the relevant vehicles. This data is consistent with the data available to Renault Group

Emissions related to electricity consumption are calculated using the same principles as tailpipe emissions, either directly from manufacturer databases or from averages established from EEA databases. Emission factors related to electricity generation by country (average CO₂ per kWh) are also taken into account. This data is aligned with the emission factors used by Renault Group.

Emissions related to the production and transportation of fuels have been considered based on the country and fuels of the financed vehicles. These detailed coefficients are aligned with Renault Group's assumptions.

Greenhouse gas emissions related to vehicles constitute all financed emissions and are currently classified as scope 3. Future Pillar 3 reports will reflect any changes in scope classification and potential methodological developments.

In particular, it is planned to enhance the calculation of financed emissions by adding emissions related to the production and end-of-life of vehicles and batteries, to provide a comprehensive view of the emissions associated with the lifecycle of financed vehicles

NACE sector codes

NACE sector codes are available in internal databases at the level of a letter and 3 digits, for example D.351. The line concerning sector D35.11 is therefore not filled in.

Segment G presented in this template includes financing of Renault and Nissan dealership inventories (NACE code G45). This financing is very short-term, with an average residual maturity of less than 6 months. Exposures to companies excluded from the EU Paris-aligned Benchmarks

The evaluation of the alignment of Corporate customers with the Paris Benchmarks was carried out manually using the NACE sector codes of the customers and information made available in disclosures or websites.

In order of priority, companies with exposures greater than 100k€ were assessed, then exposures greater than €50k depending on the availability of information. All counterparties for which the assessment was not possible were considered by default as non-aligned.

As Mobilize F.S. group never finances real estate, template 2 is not completed as non-applicable.

RISKS – PILLAR III

Template 3 : Banking book - Climate change transition risk: Alignment metrics

Sector	NACE Sectors (a minima)	Portfolio gross carrying amount (Mn EUR)	Alignment metric	Year of reference	Distance to IEA NZE2050 in % ***	Target (year of reference + 3 years)
Automotive	Automotive	24 533	gCO ₂ / km Share of PHEV BEV and FCEV	2025-192,1 2025-9%	-81,3% -86,0%	2028: 137,9 gCO ₂ / km 2028: 20% PHEV / BEV

*** PIT distance to 2030 NZE2050 scenario in % (for each metric)

In line with the financed emissions methodology, the table on portfolio alignment presents the entire portfolio under the “automotive industry” sector, as Mobilize F.S group financing are allocated to vehicles.

The alignment indicators therefore include the following indicators from the IEA NZE2050 scenario:

- gCO₂/km
- share of BEV, PHEV, FCEV (PHEV = plug-in hybrid electric vehicle; BEV = battery electric vehicle; FCEV = fuel cell electric vehicle)

The reference indicators of the IEA NZE2050 scenario used (WorldEnergyOutlook2021 – table 1.2 ▷ Selected indicators in the Net Zero Emissions by 2050 Scenario) are for 2030

- gCO₂/km: 106
- share of BEV, PHEV, FCEV: 64%.

The distance of the Mobilize F.S group portfolio indicators is measured against these values.

Note that the figures do not include FCEV, as these vehicles are not financed by Mobilize F.S group.

The average gCO₂/km is shown “well to wheel” aligned with the methodology of financed emissions presented in template 1.

The internal targets announced by the Mobilize F.S. Group, in line with Renault Group's objectives, aim to achieve carbon neutrality by 2050 globally and in Europe. Intermediate targets are also developed in coherence with Renault Group. In this model, the translation of the carbon neutrality target into gCO₂/km indicators and the share of BEV, PHEV, FCEV is communicated within the scope of corporate clients.

Template 4 : Banking book - Climate change transition risk: Exposures to top 20 carbon-intensive firms

Gross carrying amount (aggregate)	Gross carrying amount towards the counterparties compared to total gross carrying amount (aggregate)*	Of which environmentally sustainable (CCM)	Weighted average maturity	Number of top 20 polluting firms included
0,5	0,002%	0,2	2,0	1

*For counterparties among the top 20 carbon emitting companies in the world

The references chosen for the development of this model are the TopTwenty Rank 1965-2017 Climate Accountability Institute and the CDP - Carbon Majors Report 2017. The counterparties listed in these two reports and financed by the Mobilize F.S. Group have been reported. Only one counterparty was identified in the TOP 20 of the world's largest carbon-emitting companies. The total exposure to this counterparty is limited.

The classification of loans and advances exposed to physical risks was established based on the assessment of exposure to natural disasters by region presented on the ThinkHazard website.

The following events were taken into account:

- floods (related to rivers, seas and oceans or rainfalls), fires, landslides, tsunamis representing the events qualified as acute
- water stress and heat wave representing the events qualified as chronic

For each type of natural disaster, a score was assigned, by region, based on ThinkHazard's assessment (very low, low, moderate, high). Two averages were then established for acute and chronic events. From these averages, the regions are classified as weakly exposed, moderately exposed, highly or very highly exposed. Highly or very highly exposed regions were selected to meet the criteria in Template 5, sensitive to the impact of acute or chronic climate events.

The division by region was made from the regions present under ThinkHazard and allowing the link with the postal codes entered in the internal databases.

Where postcodes for non-financial corporate customers cannot be linked to a ThinkHazard region, the country average is applied. For some countries (Morocco, Romania, Poland, Colombia, Switzerland...) the country average was applied in absence of available and usable post codes for ESG Pillar 3 report. For many countries in the scope, the national average leads to a "highly exposed" classification by default. This explains the relatively high proportion of exposures sensitive to acute and chronic climate.

Template 6 : Summary of GAR KPIs

June 2025	KPI			% coverage (over total assets)*
	Climate change mitigation	Climate change adaptation	Total (Climate change mitigation + Climate change adaptation)	
GAR¹ stock	7,8%	0,0%	7,8%	62,1%
GAR¹ flow	9,3%	0,0%	9,3%	69,2%

⁽¹⁾ GAR: Green Asset Ratio

Green Taxonomy

Mitigation and Adaptation Objectives to Climate Change and Remaining Environmental Objectives

To achieve the European Union's climate and energy targets for 2030, the European Commission created a classification system called the Green Taxonomy, establishing a list of environmentally sustainable economic activities. The EU Taxonomy provides companies, investors, and policymakers with appropriate definitions of economic activities that can be considered environmentally sustainable. In 2021, the EC adopted the delegated act supplementing Article 8 of the regulation establishing the Green Taxonomy ("Disclosure Delegated Act"), amended in 2022 to include certain energy sectors. In 2023, the EC amended the delegated act to align disclosure requirements with the Environmental Delegated Act. Under these regulations, Mobilize Financial Services Group is required to provide information on the environmental performance of its assets and economic activities.

These publications present information on the alignment of economic activities (publications of key performance indicators) in which "eligible" economic activities under the Green Taxonomy are assessed to determine if they are environmentally sustainable (or "aligned" with the Green Taxonomy) based on technical screening criteria.

Scope of Consolidation

RISKS – PILLAR III

The Green Taxonomy Key Performance Indicators ("KPIs") presented in the models are based on the exposures of entities within the prudential consolidation scope of Mobilize F.S Group as of December 31, 2024. Subsidiaries engaged in insurance activities are excluded from the prudential consolidation scope.

KPI: Green Asset Ratio

The Green Asset Ratio (or "GAR") corresponds to the percentage of assets aligned with the EU Green Taxonomy relative to the total covered assets.

For Mobilize Financial Services Group, only loans and advances that finance economic activities aligned with the Green Taxonomy are included in the numerator of the GAR. Other types of assets (debt securities and equity instruments) have not been assessed due to their materiality and are by default considered non-aligned. These assets represent less than 0.2% of the total assets of Mobilize Financial Services Group as of the end of June 2025.

In accordance with note 4 of Table 1. Assets included in the GAR calculation, Annex VI - Model for KPIs of credit institutions of Delegated Regulation (EU) 2023/2486 of June 27, 2023, car loans to households created before the publication obligation effective date are excluded. As such, only car financing contracts to households started after January 1, 2022, are declared eligible and are subject to an alignment study.

The denominator of the GAR includes the total loans and advances, the total debt securities, the total equity instruments, and all other covered balance sheet assets.

Total Covered Assets

Mobilize Financial Services Group does not finance corporate projects and only finances motor vehicles and associated items.

The calculation of KPIs for assets covered by the Green Taxonomy includes on-balance sheet exposures covering loans and advances to financial corporations, non-financial corporations covered by Article 19a or 29a of Directive 2013/34/EU4 (Non-Financial Reporting Directive or "NFRD"/Corporate Sustainability Reporting Directive or "CSRD"), as well as exposures to individual customers (households).

The distinction between companies subject to NFRD disclosure obligations and those not subject to NFRD disclosure obligations was made based on internal classification corresponding to Basel segmentations. Companies in EU countries with a turnover exceeding €50 million will be considered subject to NFRD disclosure obligations.

Eligible and Aligned Economic Activities with the Green Taxonomy

Eligible economic activities under the Green Taxonomy are those that can be assessed as environmentally sustainable. Aligned economic activities with the Green Taxonomy are those that have been assessed as environmentally sustainable.

Due to its automotive financing activity, the Mobilize Financial Services Group has only considered the following taxonomic activity: Transport by motorcycles, passenger cars, and light commercial vehicles (taxonomy code 6.5), including activities such as purchasing, financing, leasing, renting, and operating passenger cars and light commercial vehicles.

This eligible activity concerns both electric and internal combustion engine vehicles; the Group thus complies with the "Commission notice on the interpretation of certain legal provisions of the Disclosures Delegated Act under Article 8 of EU Taxonomy Regulation on the reporting of eligible economic activities and assets" (2022/C 385/01), published on October 6, 2022.

Within this scope, activities are considered aligned if they make a substantial contribution to the considered objective, do not cause significant harm ("Do Not Significantly Harm" or DNSH) to other environmental objectives, and comply with minimum safeguards.

Aligned activity 6.5 only concerns vehicles emitting less than 50 g of CO₂e per kilometer, also referred to as "low-emission vehicles" in this section. This includes all electric (EV) and plug-in hybrid (PHEV) ranges of all brands financed by Mobilize Financial Services Group. The due diligence carried out for the detailed verification of DNSH criteria and minimum safeguards is described below.

Activity 6.5 has been entirely linked to the climate change mitigation objective through the substantial criterion of average emissions level (gCO₂eq). No contribution to climate change adaptation has been identified. For clarity in reading the taxonomy templates, climate and environmental objectives that should appear as zero are not illustrated.

Non-Eligible Economic Activities under the Green Taxonomy

For Mobilize Financial Services Group, the economic activities considered non-eligible under the Green Taxonomy to date are: financing spare parts and cash financing for car dealerships (unallocated loans). These assets will be evaluated in future publications of the Group, and their non-eligibility status may therefore evolve.

These assets represent less than 2% of the Group's total assets as of the end of June 2025.

Assets Excluded from the Numerator for GAR Calculation (Covered in the Denominator)

Exposures to Companies Not Subject to NFRD/CSRD

Exposures to companies not subject to non-financial information disclosure obligations have been excluded from the evaluation of eligible economic activities under the Green Taxonomy. These exposures are excluded from the numerator of the GAR but included in the denominator.

Derivatives

RISKS – PILLAR III

Derivatives in the banking portfolio are excluded from the numerator but included in the total GAR denominator.

On demand Interbank Loans

On demand interbank loans are loan exposures on demand to other credit institutions. These are excluded from the numerator but included in the total GAR denominator.

Cash and Cash Equivalents

Cash and cash equivalents are excluded from the numerator but included in the denominator, except for liquidity with central banks, which are not covered by the GAR calculation.

Other Assets

Other assets include, in particular, fixed assets that are excluded from the Green Taxonomy framework and whose eligibility for the Green Taxonomy cannot therefore be assessed. Other assets are included in the total assets used in the denominator for ratio calculations.

Non-Covered Assets for GAR Calculation

Non-covered assets in the GAR calculation are excluded from both the numerator and the denominator.

Central Governments and Supranational Issuers

Exposures to central governments and supranational issuers are excluded from the GAR calculation.

Central Banks

Exposures to central banks include held liquidity and all other banking exposures to central banks. These are outside the scope of the GAR calculation.

Trading Book

The trading portfolio is excluded from the GAR calculation scope.

Eligibility and Alignment Data of Counterparties

Due to its financing activity dedicated to motor vehicles for businesses and individuals, Mobilize Financial Services Group does not rely on counterparty information for the evaluation of eligibility and alignment with the Green Taxonomy. This evaluation depends on the financed vehicle and the technical data associated with that vehicle.

There is no distinction in the alignment evaluation by considering either the turnover or the CAPEX of counterparties. As such, all taxonomy templates are published only once and not duplicated in turnover and CAPEX.

Method Used to Determine the Scope of Substantial Contribution Activities

To determine the substantial contribution of eligible activities related to vehicles, loans and advances to financial corporations, non-financial corporations, households, and local administrations were analyzed based on the vehicle model and powertrain technology.

Climate Change Adaptation

A climate risk and vulnerability assessment was conducted by Renault Group to identify sites that may be affected by physical climate risks. These risks were evaluated based on the lifespan of the concerned asset and are primarily of three types (extreme heat, water stress, and flooding) covered by adapted action plans.

Mobilize Financial Services Group conducted a review of its sites, including IT service provider sites, in terms of exposure to several extreme climate events (floods, heatwaves, water stress, etc.). This assessment was carried out with the assistance of a specialized firm and demonstrated that the sites of Mobilize Financial Services Group are not concentrated in areas highly exposed to physical climate risks. For sites identified as vulnerable, this should lead to consideration in business continuity plans.

Transition to a Circular Economy

Renault Group's circular economy policy covers DNSH criteria related to (a) the reuse and use of secondary raw materials and reused components in manufactured products, (b) design for high durability, recyclability, ease of disassembly, and adaptability of manufactured products, (c) waste management that prioritizes recycling over disposal in the manufacturing process, and (d) substances of concern are identified and tracked throughout the lifecycle.

According to information obtained from the car manufacturers, low-emission vehicles concerned by activity 6.5, financed by the Mobilize Financial Services Group, are reusable or recyclable at a minimum of 85% by weight, and reusable or recoverable at a minimum of 95% by weight.

Pollution Prevention and Control

The low-emission vehicles financed by Mobilize Financial Services Group are all equipped with tires that meet the noise and external rolling resistance classes required by European Regulation EC 661/2009. As the taxonomy requirements go beyond regulatory compliance on this criterion, an additional analysis was conducted and demonstrated that most tire references originally fitted on low-emission vehicles meet this criterion, leading us to adopt an alignment coefficient of 1 for this DNSH. However, this position will be reassessed as reliable data

RISKS – PILLAR III

related to the actual tire fitting becomes available for all financed vehicles; the alignment coefficient will be adjusted accordingly if necessary.

With a certified noise level well below 68 dBA, Renault electric vehicles have been complying since 2021 with the external noise limits applicable from 2024, thus contributing to the reduction of ambient noise and improving the quality of life in urban areas. All low-emission vehicles marketed by Renault in Europe comply with European Regulation 540/2014/EC applicable to vehicles homologated since July 2016, which requires a maximum of 72 dBA.

Verification of Minimum Safeguards

These minimum safeguards cover several major areas, including policies, actions, and results presented in the sustainability report. These include anti-corruption, human rights, and taxation.

The tax department of Mobilize Financial Services Group ensures compliance with applicable tax rules in all countries where it operates, in accordance with international conventions and local laws, through an appropriate management system.

The Compliance Direction of Mobilize Financial Services Group deploys a structured approach aimed at analyzing and ensuring the robustness of its regulatory compliance in a sustainable and proactive manner, covering major regulated areas including "money laundering and terrorism financing," "corruption," and "competition," in close collaboration with the Legal Department.

To the best of our knowledge, Mobilize Financial Services Group was not subject to any convictions in 2024 for corruption, tax evasion, or human rights violations.

Model 9.3 – Summary Table

	KPI (June25)			% coverage (relative to total assets)
	Climate Change Mitigation (CCM)	Climate Change Adaptation (CCA)	Total (CCM + CCA)	
BTAR stock	10,0%	0,0%	10,0%	77,2%
BTAR flow	11,8%	0,0%	11,8%	88,9%

Model 10 – Other climate change mitigation measures not covered by Regulation (EU) 2020/852 is not published because the Mobilize F.S. Group does not hold any obligations that could be assessed as "green" or "sustainable" in its assets. Loans have been evaluated within the framework of the taxonomy, and no additional category outside alignment with the taxonomy can be considered "green" or "sustainable".

VII - RESIDUAL VALUE RISK

RISK FACTORS

Residual value (RV) is the estimated value of the vehicle at the end of the leasing contract. Nevertheless, there are risks of unexpected used car market development, due to offer saturation, occurrence of an economic crisis, political decisions and other factors that could lead to a residual value loss, with a resale price lower than the initial RV.

In the environment Mobilize F.S. Group, there several kinds of risk bearer:

- Mobilize F.S. Group through its subsidiaries- so called direct residual value risk
- The manufacturer (especially in France but also in some other countries at the launch period of a brand-new model)
- The dealer network

In the last 2 cases, the risk is called indirect residual value risk.

In the following section, we focus our remarks on the significant changes in Direct Risk.

The Mobilize Lease&CO brand was launched in 2022 with the aim of developing a Direct Risk Operational Leasing business. Some countries were already using Direct Risk (UK and Brazil), but the decision was then taken to gradually transform the indirect Operational Leasing business into Direct Risk. After Italy and Spain in 2022/2023, and then other (Slovenia, Romania, Portugal, Netherlands, Colombia), the new production of Operational Leasing contracts to corporate in France enter this transformation scheme at the end of 2024.

This change responds to the development of long-term leasing in Europe, both in the corporate market and in the private segment.

As part of its expansion into the long-term leasing market, MFS acquired MeinAuto/Mobility Concept in Germany at the beginning of 2024. This has significantly altered the Group's exposure to direct residual value risk, making MA/MC the Group's No. 1 subsidiary in terms of residual value exposure to the long-term leasing product.

Nevertheless, in terms of overall VR risk, the UK portfolio. remains the leader.

Management principles and processes

The Used car market development, the range of products, the pricing of manufacturers and the remarketing channels among other topics, are strongly monitored to optimize the control of this risk by deciding adequate actions on residual value strategy.

As Groupe Mobilize F.S. is a player whose residual value risk is gradually increasing, it continues to implement a prudent provisioning policy, setting aside provisions for contracts where regular prospective and iterative observations highlight risks of resale below the contractual residual value.

Breakdown of residual values risk carried by the Mobilize F.S group

(in millions of euros)	Residual value exposure					Residual Value Provision				
	H1 2025	2024	2023	2022	2021	H1 2025	2024	2023	2022	2021
